

ICAPS© AND OPERCOM® TRAINING

COMSIP specializes in the OPERCOM® methodology and provides trainers for TOTAL in the ICAPS © commissioning tracking software. On request, we also regularly organize training sessions at the Paris headquarters of COMSIP for experts wishing to develop their skills.

OPERCOM® is a methodology which allows defining the commissioning needs in order to have the best possible transfer between the construction and the operation teams by the fastest and safest way.

Used by the biggest players in the market, **OPERCOM®** is the solution to optimize the commissioning of your projects.

ICAPS© (Integrated Commissioning And Progress System) is a database developed by the company TOTAL to accompany the commissioning methodology **OPERCOM®**.

ICAPS© has several modules and can effectively meet the following needs:

- A clear interface between construction and operations,
- Ensure that each equipment is tested,
- The need to test equipment sequentially and hierarchically,
- Homogeneous approach and common understanding among all parties,
- Maximized trials to ensure a quick and safe start, followed by durable operations,
- Accurate and detailed progress report of tests,
- Traceability and documentation regarding all tests carried out.
